

## FX STX Slug Liner A

The initial round of FX Smooth Twist X Slug liners have been developed around the Nielsen Specialty Ammo line of precision hunting slugs; picked due to the demand for them in the market place. These liners will work well with any quality slug made to these specifics:

1. Bore dimension listed below.
2. Listed weight range.
3. Correct regulator / hammer setting on the rifle.

.22 caliber = 21-28gr slugs sized .217

.25 caliber = 34-40gr slugs sized .250

FX recognizes that there are other equally comparable precision slug manufacturers and we will continue to develop slug liners to add to the series. We will also work to add additional caliber options.

\* Lighter slugs will shoot better out of shorter 500mm barrels. Heavier boat tail shaped slugs may not fit in the current magazine design and will need to be single loaded. For optimum accuracy, only use swaged slugs sized correctly to the bore diameter.

## FX STX Pellet Liner A

The FX STX Pellet Liner A, is the original Smooth Twist X liner. This is currently shipped with all FX Crown & FX Impact rifles\*. This is the pellet liner that works particularly well with standard JSB pellets (as listed below). It has also proven itself to work extremely well with other manufacturers standard pellets for each particular caliber.

.177 caliber = JSB Diabolo Exact 8.4gr

.22 caliber = JSB Diabolo Exact Jumbo 15.89gr  
JSB Diabolo Exact Jumbo Heavy 18.13gr

.25 caliber = JSB Diabolo Exact King 25.39gr  
JSB Diabolo Exact King Heavy MKII 33.95gr

.30 caliber = JSB Diabolo Exact 44.75gr  
JSB Diabolo Exact 50.15

\*The FX Wildcat & FX Dreamline come standard with an FX Smooth Twist barrel liner. The STX Pellet Liner A is a common upgrade for these rifles.

## FX STX Pellet Liner B

The FX STX Pellet Liner B is a barrel liner that will accommodate pellets with a slightly larger head or skirt size. Some common pellets like the H&N Barracuda's & JSB Monsters have a slightly larger head size or skirt size. These pellets perform better in the B liner compared to the A liner, particularly at longer distances.

Below are some popular pellets the individual caliber B liners were made for. They can also work with pellets with similar attributes.

.22 caliber = JSB Exact Jumbo Monster Redesigned 25.39gr  
H&N Baracuda

.25 caliber = JSB Exact King Heavy MKI & II 33.95gr
