

WILDCAT MKII .30 Cal

The world renowned FX Wildcat is one of the finest bullpups ever made. It's perfectly balanced, light weight, powerful frame is further enhanced by a smooth cocking side-lever positioned perfectly and directly over one of the most amazing bullpup triggers you will ever have the pleasure of shooting. Now the Wildcat family is complete with the much anticipated addition of the .30 Caliber FX Wildcat MKII.

The .30 Caliber Wildcat produces fierce power and phenomenal accuracy due to its 700mm Smooth Twist X barrel. The .30 Wildcat delivers up to 75 ft lbs of relentless muzzle energy using the same barrel and barrel system that is found on the FX Impact X. A competition grade 700mm STX barrel housed within the groundbreaking Interchangeable Barrel Liner System. This visionary barrel design allows different barrel liners to be easily exchanged on the rifle, allowing you to match the barrel to the particular projectile you would like to use.

The new .30 Cal Wildcat MKII also includes the new AMP Regulator. The AMP Reg (short for "Adjustable Match Precision" Regulator) is a newly designed high performance regulator. The AMP's advanced design allows for precision tuning that can be dialed in to a more exact pressure measurement without the spring fatigue or pressure creep that plague lesser regulators. Plus, the AMP allows you to increase and decrease regulator pressure while the Wildcat is fully pressurized. Gone are the days of needing to de-pressurize your rifle before lowering the regulator pressure. This allows the AMP Reg to be externally adjusted within the fixed 300cc aluminum air reservoir using a simple Allen key.

This new large caliber FX Wildcat is a perfect alternative to its big brother the FX Impact .30 Cal. You get everything you want, including the 700mm STX barrel that is both shrouded and moderated, a high performance externally adjustable regulator, a quick load 7-round magazine, and world class performance all in a synthetic, walnut or black pepper laminate bullpup stock. All these features come at a remarkable price point that solidifies the FX Wildcat as a premier bullpup in a class of its own.

SPECIFICATIONS

Caliber	.30
Weight	6.75lbs
Cocking System	Sidelever
Magazine Type	7 Shot
Stock	Synthetic
Barrel Length	27.5" (700mm)
Length	35" without Shroud 40" with Shroud
